## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-13 are, drawn to hydrogel for use as a soft tissue filler, classified in class 528, subclass 310+.
  - II. Claims 14-25 are, drawn to method of filling soft tissue, classified in class 424, subclass 422.
  - III. Claim 26 is, drawn to method of filling soft tissue and further comprising administering cells wherein the cells are stem cells, classified in class 435, subclass 325+.
  - IV. Claims 27-30 are, drawn to prosthetic device, classified in class 604, subclass 1+.

*Claim 31*  
The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and IV are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as thickener in hair shampoos and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

3. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product can be used for ophthalmic surgical procedures.

4. Groups II and III are different methods. The methods are different because they use different steps, which will produce different results. In this case Group III employs the extra step of administering stem cells, which is not, required for method of group I. Therefore Groups II and III have different issues regarding patentability and enablement and represent patentably subject matter.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II-IV, restriction for examination purposes as indicated is proper.

7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper. The different methods and products would require completely different searches in both the patent and non-patent databases, and there is no

Art Unit: 1615

expectation that the searches would be coextensive. Therefore, this does create an undue search burden, restriction for examination purposes as indicated is proper

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

1. Applicant is also reminded that a 1-month (not less than 30 days) shortened statutory period will be set for response when a written restriction is made without an action on the merits. This period may be extended under the provisions of 37 CFR 1.136(a).
